Wrong Way Warning Flashing LED Signs

Wrong-way, head-on crashes have much higher injury and death rates than other types of accidents. A majority of these collisions occur at night and are caused by impaired, distracted or confused drivers who enter highways going the wrong direction.

Our TS40 series WRONG WAY (R5-1A) and DO NOT ENTER (R5-1) signs employ a set of synchronized high-intensity flashing LEDs that command the attention of errant drivers at exit ramps and other roadways with one-way traffic. The sign LEDs flash once per second, continuously 24/7. Optional activation options include a programmable timer and a photocell for dusk-to-dawn operation.

Applications

- Highway exits
- Divided roadways
- One-way streets
- Parking garage exits

Features

- Installs easily onto any new or existing sign post.
- MUTCD Compliant.
- Visible both day and night.
- High intensity LEDs.
- LEDs flash continuously 24/7.
- Highway grade Type IX reflective sheeting.
- Corrosion resistant aluminum construction.
- Low power consumption.

Options

- Programmable timer.
- Photocell for dusk-to-dawn operation.
- Solar power (24/7 flashing mode: 4 LEDs per sign).
- Battery backup.
- Multiple sign wireless flashing.
